CONTENTS

Volume 34, Issue Nos. 1–8 (2000)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 15 September

A characteristic based method for the calculation of three-dimensional incompressible, turbulent and steady flows in hydraulic turbomachines and installations: P. A. Govatsos and D. E. Papantonis 1

Large eddy simulation of free surface shallow water flow: C. W. Li and J. H. Wang ... 31

A new velocity-vorticity boundary integral formulation for Navier–Stokes equations: R. Machane, J.-L. Archard and E. Canot 47

Fourier analysis of an equal-order incompressible flow solver stabilized by pressure-gradient projection: G. C. Buscaglia, F. G. Basombrio and R. Codina 65

Issue No. 2, 30 September

Adaptive meshing techniques for viscous flow calculations on mixed element unstructured meshes: D. J. Mavriplis 93

Analysis of flow in the plate-spiral of a reaction turbine using a streamline upwind Petrov–Galerkin method: P. K. Maji and G. Biswas 113

A fast non-Fickian particle-tracking diffusion simulator and the effect of shear on the pollutant diffusion process: P. S. Addison, A. S. Ndumu and B. Qu 145

Improvements to compressible Euler methods for low-Mach number flows: M. Sabanca, G. Brenner and N. Alemdaroğlu 167

Issue No. 3, 15 October

Computational fluid flow in two dimensions using simple T4/C3 element: Yih J. Jan, S. J. Huang and T. Y. Lee 187

Computation of three-dimensional flow around square and circular piers: Ming-Hseng Tseng, Chin-Lien Yen and C. C. S. Song 207

Numerical experiments on the gas flow between eccentric rotating cylinders: L. de Socio and L. Marino 229

Three-dimensional boundary-element analysis of drop deformation in confined flow for Newtonian and viscoelastic systems: R. Khayat 241

BOOK REVIEW

"The Finite Element Method in the Static and Dynamic Deformation and Consolidation of Porous Media" by R. W. Lewis and B. A. Schrefler. Second Edition: H. R. Thomas 277

Issue No. 4, 30 October

A finite element thermally coupled flow formulation for phase-change problems: M. A. Cruchaga and D. J. Celentano 279

An implicit three-dimensional numerical model to simulate transport processes in coastal water bodies: L. Balas and E. Ozhan 307

An arbitrary Lagrangian–Eulerian finite element approach to non-steady state turbulent fluid flow with application to mould filling in casting: L. Gaston, A. Kamara and M. Bellet 341

Issue No. 5, 15 November

An algorithm for unsteady viscous flows at all speeds: I. Mary, P. Sagaut and M. Deville 371

Development of highly accurate interpolation method for mesh-free flow simulations II. Application of CIVA method to incompressible flow simulations: N. Tanaka 403

A reduced-order approach for optimal control of fluids using proper orthogonal decomposition: S. S. Ravindran 425

The discrete transfer radiation model in a natural gas-fired furnace: E. P. Keramida, H. H. Liakos, M. A. Founti, A. G. Boudouvis and N. C. Markatos 449

Issue No. 6, 30 November

Unstructured pressure-correction solver based on a consistent discretization of the Poisson equation: B. de Foy and W. Dawes 463

A multigrid finite difference approach to steady flow between eccentric rotating cylinders: M.-H. Chou 479

A nonconforming spectral element ocean model: J. G. Levin, M. Iskandarani and D. B. Haidvogel 495

An unconditionally stable semi-Lagrangian method for the spherical atmospherical shallow water equations: M. F. Carfora 527

ANNOUNCEMENT 559

Issue No. 7, 15 December

Transient effects of orthogonal pipe oscillations on laminar developing incompressible flow: B. Benhamou, N. Galanis and A. Laneville 561

Numerical heat transfer in a cavity with a solar control coating deposited to a vertical semitransparent wall: G. Alvarez and C. A. Estrada 585

Motion of deformable drops in pipes and channels using Navier–Stokes equations: Ch. Kaliakatsos and S. Tsangaris 609

Solution of the Navier–Stokes equations in velocity–vorticity form using an Eulerian–Lagrangian boundary element method: D. L. Young, S. K. Yang and T. I. Eldho 627

Issue No. 8, 30 December

Fictitious domain approach for numerical modelling of Navier–Stokes equations: K. Khadra, P. Angot, S. Parneix and J.-P. Caltagirone 651

Optimal design of paper machine headboxes: J. Hämäläinen, R. A. E. Mäkinen and P. Tarvainen 685

Gauge finite element method for incompressible flows: W. E and J.-G. Liu 701

A variationally consistent finite element approach to the two-fluid internal contact-line problem: N. G. Hadjiconstantinou and A. T. Patera 711

Finite element solution of three-dimensional turbulent flows applied to mold-filling problems: F. Ilinca and J.-F. Hétu 729
